VURSAWEDGE KEY FEATURES

RING COMPATIBLE

Ring Compatible: VursaWedge is compatible with Garrision, Palodent, and Triodent Ring systems. Simply placeVursaWedge in embrasure space. Place one wing of ring over the handle, and the other wing **in between the VursaWedge Split Wings.**

TACKLES TIGHT EMBRASURES

VursaWedge can be modified for tight embrasure cases, especially in maxillary molar location. Simply remove one of the split wings with a pair of scissors (remove wing that would contact adjacent tooth, leaving wing that contacts the matrix band). Place ring over the handle and allow ring to press single wing of VursaWedge to seal margin.

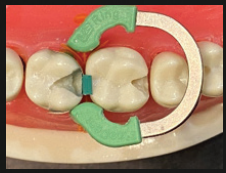
VURSAWEDGE KEY FEATURES

SEALS IRREGULAR MARGINS

VursaWedge comes with a second wedge, **Wedge 2**, which **can** be used to help seal irregular margins. **Wedge 2 is not neccessary in all cases**. Only when slight furcation involvement or open margin present. Place **Wedge 2** in between split wings of VursaWedge. The two wedges will gently lock in place. After **Wedge 2** is in position, place ring over the setup. You may either place ring to engage split wings or to not engage split wings.



SIMPLIFIES CUSP CASES

VursaWedge can be used to enhance and simplify cuspal involvement cases. Simply insert VursaWedge so that the split wings open up to the side of cuspal involvement. Gently place ring over the VursaWedge, ensuring the ring pads engage the split wing of the VursaWedge. This keeps pressure off the fragile matrix, streamlining wider preparations and cuspal involvement cases.
